Tony Demark's Before and After Satellite Photos of the Tsunami

<http://homepage.mac.com/demark/tsunami/>

You will find stunning arial pictures - unthinkable images - a set of 14 pairs of "before and after" shots of Sri Lanka's and Indonesia's coast.

(Perhaps 1/4 of a million innocent people died in this catastrophe -- I would not find it unimaginable that as many as 2 billion people might die from human-precipitated environmental disasters in the next 45 years. It really wouldn't take that much effort to avert most of the trouble that we are setting up for ourselves. See <http://www.earthfuture.com/> for some solutions.)
