Two years ago, the government promised energy-intensive LNG projects electrical rates at \$83.02 per megawatt hour.

Now Clark has offered LNG developers a stunning give-it-away rate of \$53.60. That is \$30 below the original quote and about half the expected \$100-plus cost of a megawatt-hour from the \$9-billion Site C dam. That dam will raise electricity prices so Clark can give away our tax money to tar sands LNG developers and US consumers.*

So aside from stealing native land, destroying native sacred burial sites, putting BC food and water security at risk and ignoring public wishes, Clark is going to steal BC taxpayer money and give it to Alberta tarsands companies, LNG companies and the US. Why is she not in jail?
